

Water In a Bag

Materials Needed:

- ✓ Quart or Snack Sized Plastic Bag
- ✓ A Sharpie
- ✓ Tape
- ✓ Water
- ✓ Blue Food Coloring (optional)

Steps:

1. Draw a line of "water" about one inch from the bottom. Draw a sun and clouds at the top.

2. Add water up to line you drew with your sharpie and seal it. (Optional: add in a few drops of your blue food coloring).

3. Tape your baggie to a window that gets a lot of sun.

4. Now wait ☺ The evaporation process may take a hours days, so keep checking!

The sun will cause the water to evaporate. You can see it start to condense in the clouds you drew. As the condensation builds up it will slide down the sides of the bag back to the water at the bottom. You made rain!

Additional Skill Practice:

Here are some additional skills you can work on with your kiddo related to this craft:

- Following directions
- Fine motor skills
- Waiting
